

PHASE 1 – BRAINSTORMING & IDEATION

1. Project Title

Auto Ticket Classification using Flow Designer

2. Problem Identification

The school IT helpdesk receives multiple incident requests every day from students and teachers. These requests may be related to Wi-Fi issues, projector failures, password problems, and slow computers.

Currently, IT staff manually review each request and select the appropriate category and subcategory. This process is time-consuming and may lead to classification errors.

3. Proposed Idea

The proposed solution is to automate the classification of IT support tickets using ServiceNow Flow Designer.

The system will analyze keywords in the ticket's short description and automatically identify the appropriate Category and Subcategory.

4. Objectives

- ✓ Automatically classify incidents when they are created.
- ✓ Reduce manual effort for IT support staff.
- ✓ Improve ticket routing efficiency.
- ✓ Maintain consistent ticket classification.
- ✓ Provide a simple, no-code solution that is easy to maintain.

5. Proposed Classification

Keyword/Issue	Category	Subcategory
Wi-Fi / Network	Network	Wi-Fi
Projector	Hardware	Projector
Password / Login	Access	Forgot Password
Slow / Hanging	Performance	Slow Computer

6. Expected Outcome

The proposed system will automatically classify newly created IT tickets based on predefined keywords. This will reduce manual classification work and provide a more consistent and efficient ticket-handling process.

7. Benefits

- ✓ Saves time for IT staff.
- ✓ Reduces manual classification errors.
- ✓ Improves ticket routing.
- ✓ Provides standardized ticket information.
- ✓ Can be maintained and extended easily using Flow Designer.
