

README

Auto Ticket Classification using Flow Designer

Project Overview:

Auto Ticket Classification using Flow Designer is a ServiceNow-based automation project developed for a school IT helpdesk.

The system automatically classifies IT support tickets based on keywords present in the ticket's short description. It assigns the appropriate Category and Subcategory and sends an automated email notification to the caller.

Problem Statement:

The school IT helpdesk receives multiple support requests from students and teachers related to Wi-Fi, projector failures, password problems, and slow computers.

Manual classification of each ticket requires additional time and may lead to errors. This project provides an automated solution using ServiceNow Flow Designer.

Objectives

- ✓ Automatically classify IT tickets when they are created.
- ✓ Reduce manual effort for IT support staff.
- ✓ Improve ticket routing efficiency.
- ✓ Maintain consistent ticket classification.
- ✓ Provide a simple and maintainable no-code solution.

Technologies Used

- ✓ ServiceNow
- ✓ Flow Designer
- ✓ Custom Table
- ✓ Choice Fields
- ✓ Reference Fields
- ✓ Automated Email Notification

Project Features

- ✓ Automatic ticket classification

- ✓ Category and Subcategory dependency
- ✓ Automated email notification
- ✓ Structured ticket data storage
- ✓ No-code automation using Flow Designer
- ✓ Easy maintenance and future scalability

Classification Logic

Keyword/Issue	Category	Subcategory
Wi-Fi / Network	Network	Wi-Fi
Projector	Hardware	Projector
Password / Login	Access	Forgot Password
Slow / Hanging	Performance	Slow Computer

Project Workflow

Project Phases

This repository contains the project work divided into the following phases:

1. Brainstorming & Ideation
2. Requirement Analysis
3. Project Design
4. Project Planning
5. Project Development
6. Project Testing
7. Project Documentation
8. Project Demonstration

Expected Outcome:

The system automatically identifies the type of IT issue from the ticket description and assigns the appropriate Category and Subcategory. It also sends a confirmation email to the caller after ticket creation.

Future Enhancements:

The project can be extended with:

- Assignment automation
- SLA tracking
- Predictive intelligence

Conclusion:

The project demonstrates how ServiceNow Flow Designer can be used to automate IT ticket classification without complex scripting or machine learning. It provides a structured, maintainable, and scalable solution for handling common IT support requests in a school environment.
