

PHASE 8 – PROJECT DEMONSTRATION

1. Project Title

Auto Ticket Classification using Flow Designer

2. Demonstration Objective

The demonstration will show the complete working of the Auto Ticket Classification system developed using ServiceNow Flow Designer.

The demo will explain the purpose of the project, its benefits, the implementation, and the final output.

3. Demonstration Flow

The project demonstration will cover the following steps:

Step 1 – Introduction

Introduce the project by explaining:

- Project name
- Problem being addressed
- Purpose of the project

Step 2 – Project Setup

Show the Incident Workflow table and its configured fields:

- Number
- Caller
- Category
- Subcategory
- Short Description
- Description
- State
- Assigned Group
- Assigned To

Step 3 – Category and Subcategory

Demonstrate the dependency between Category and Subcategory.

The available Subcategory options change according to the selected Category.

Step 4 – Flow Designer

Show the Auto Classify School IT Tickets flow.

Explain that the flow is triggered when a new ticket is created and the Category is empty.

Step 5 – Automatic Classification

Create a sample ticket and enter an issue in the Short Description.

For example: “WiFi not working in library”

Show that the system automatically assigns:

Category → Network

Subcategory → Wi-Fi

Step 6 – Email Notification

Show that an automated confirmation email is sent to the caller after the ticket is created and classified.

Step 7 – Second Test

Create another ticket with:

“Projector not turning on”

Show the automatic classification:

Category → Hardware

Subcategory → Projector

Step 8 – Final Output

Show the completed ticket with its automatically assigned Category and Subcategory and the email notification.

4. Benefits Demonstrated

The project demonstrates the following benefits:

- ✓ Reduces manual ticket classification.
- ✓ Improves ticket routing efficiency.
- ✓ Provides consistent ticket categorization.
- ✓ Reduces classification errors.
- ✓ Provides automatic confirmation to the caller.
- ✓ Uses a no-code and maintainable automation approach.

5. Final Outcome

The demonstration will show that the ServiceNow Flow Designer successfully automates the classification of IT support tickets based on predefined keywords and sends an automated confirmation email to the caller.

6. Demo Video Requirements

The project demonstration video will include:

- ✓ Screen sharing of the project
- ✓ Student voice-over
- ✓ Project name
- ✓ Project purpose
- ✓ Project benefits
- ✓ Project execution and working process
- ✓ Final output
