

PHASE 7 – PROJECT DOCUMENTATION

1. Project Title

Auto Ticket Classification using Flow Designer

2. Project Overview

The project is developed for a school IT helpdesk that receives different types of support requests from students and teachers.

The system uses ServiceNow Flow Designer to automatically classify IT tickets based on keywords present in the ticket's short description.

3. Problem Statement

IT staff previously had to manually review every support request and select the appropriate category and subcategory. This process required additional time and could lead to classification errors. The proposed system automates this classification process.

4. Objectives

The main objectives of the project are:

- ✓ Automatically classify incidents when they are created.
- ✓ Reduce manual effort for IT staff.
- ✓ Improve ticket routing efficiency.
- ✓ Maintain consistent ticket classification.
- ✓ Provide an easily maintainable no-code solution.

5. Technologies Used

- ServiceNow
- Flow Designer
- Custom ServiceNow table
- Choice and Reference fields
- Automated Email Notification

6. System Functionality

The system performs the following operations:

- ✓ Creates and stores IT support tickets.
- ✓ Accepts the caller and issue description.
- ✓ Analyzes keywords in the Short Description.
- ✓ Automatically assigns Category and Subcategory.
- ✓ Sends a confirmation email to the caller.
- ✓ Stores the ticket information in a structured format.

7. Classification Rules

Issue	Wi-Fi / Network	Projector	Password / Login	Slow / Hanging
Category	Network	Hardware	Access	Performance
Subcategory	Wi-Fi	Projector	Forgot Password	Slow Computer

8. Project Results

The implemented Flow Designer automation successfully provides automatic ticket classification. The dependent choice fields help maintain consistent data, while email notifications provide confirmation to the caller.

The project therefore reduces manual classification work and provides a structured approach to handling school IT support requests.

9. Future Enhancement

The solution can be extended in the future with additional features such as:

- Assignment automation
- SLA tracking
- Predictive intelligence

These extensions can further improve the capabilities of the IT helpdesk system.

10. Conclusion

The Auto Ticket Classification using Flow Designer project demonstrates how ServiceNow can be used to automate IT ticket classification without complex scripting or machine learning.

The system provides a maintainable and scalable solution for handling common IT support requests in an educational environment.
