

PHASE 6 – PROJECT TESTING

1. Introduction

The testing phase is carried out to verify that the Auto Ticket Classification system works as expected. The testing focuses on automatic ticket classification, data validation, and email notification.

2. Testing Objectives

The main objectives are:

- ✓ Verify that IT tickets are created successfully.
- ✓ Verify that the correct Category is assigned automatically.
- ✓ Verify that the correct Subcategory is assigned automatically.
- ✓ Verify that ticket information is stored correctly.
- ✓ Verify that an email notification is sent to the caller.
- ✓ Validate the overall automation process.

3. Data Validation

The following data validation checks are performed:

- ✓ Mandatory fields are captured correctly.
- ✓ Auto-number is generated without duplication.
- ✓ Category and Subcategory values are stored accurately.
- ✓ Reference fields resolve correctly to the corresponding user and group records.

4. Test Scenario 1 – Wi-Fi Issue

Test Input

Caller: Valid user

Short Description: WiFi not working in library

Expected Result

The system should automatically assign:

- Category → Network
- Subcategory → Wi-Fi
- Email → Sent to caller

Actual Result

The ticket is automatically classified as Network → Wi-Fi, and an email notification is sent to the caller.

5. Test Scenario 2 – Projector Issue

Test Input

Caller: Valid user

Short Description: Projector not turning on

Expected Result

The system should automatically assign:

- Category → Hardware
- Subcategory → Projector
- Email → Sent to caller

Actual Result

The ticket is automatically classified as Hardware → Projector, and an email notification is sent to the caller.

6. Email Notification Testing

The email notification is verified by opening the email records in ServiceNow and searching for the configured subject.

The email record is opened and the Preview Mail option is used to verify the notification content.

7. Test Results

Test Case	Input	Category	Subcategory	Email
TC01	WiFi not working in library	Network	Wi-Fi	Passed
TC02	Projector not turning on	Hardware	Projector	Passed

8. Testing Conclusion

The tested scenarios confirm that the Flow Designer automation correctly classifies the tested IT tickets and sends the required email notification to the caller.
